

SAMPLE DFIR TIMELINE REPORT

Hacking101 Academy · Student Assessment Submission · REDACTED for portfolio

Case Reference: [REDACTED-2026-A] | Organization: [REDACTED ENERGY UTILITY]
Lead: J. T. (Hacking101 DFIR Graduate, 2025) | Examiner: M. R. (Hacking101 DFIR Graduate, 2025)

1. Executive Summary

A suspected ransomware intrusion into production OT environment was identified via EDR alert. Hacking101 DFIR methodology isolated the affected segment, preserved chain-of-custody, and mapped ATT&CK; techniques within 4 hours of detection.

2. Timeline of Events

UTC Timestamp	Event	Source	TTP (MITRE)
2026-03-14T03:17Z	EDR alert: malicious PowerShell encoded command	CrowdStrike EDR	T1059.001
2026-03-14T03:22Z	Memory image acquired — VM snapshot	F3Koradger / KAPE	T1027
2026-03-14T03:45Z	IOC extraction: 2 file hashes, 3 IPs, 1 C2	Volatility 3	T1071.001
2026-03-14T04:10Z	Segment isolated at L3 switch (VLAN 1425)	Switch config	T1489
2026-03-14T05:30Z	Registry timeliner — persistence at SYSTEM	RegRipper	T1547.001
2026-03-14T06:55Z	Report delivered; indicators pushed to SIEM	Splunk	—

3. Key Findings

• Adversary accessed via compromised VPN credential (credential spraying, T1110.003). • Lateral movement limited to two systems before containment. • No data exfiltration confirmed.

4. Recommendations

1. Enforce phishing-resistant MFA on all remote-access portals (Essential Eight ML2). 2. Implement RDP gateway with session recording. 3. Restrict SYSTEM-level Run key modification (ISM control AC-2).
